

GUNYAH ASSEMBLY INSTRUCTIONS

GUNYAH INSTRUCTIONS

1. Remove the Fly, Inner poles and pegs; carefully assemble the pole, ensuring each section is fully inserted.
2. If using foot print: clear the ground of sharp objects, lay the foot print with the seam tape upward, loosely peg the four corners.
3. Lay the inner tent on top of the foot print and pull the four peg loops over the pegs. Insert the pole ends into the eyelets and clip the inner to the pole.
4. Drape the fly over the inner and attach buckles located at the pole ends. Attach the rear peg loops to the pegs.
5. Take the shock cord with the clip on the end, located either side of the door and attach to the corresponding location on the inner tent. (Fig 4). Relocate the pegs to evenly tension the inner and fly. (fig 5)
