

# SLEEPING BAG CONNECTION JOINED AT THE ZIP

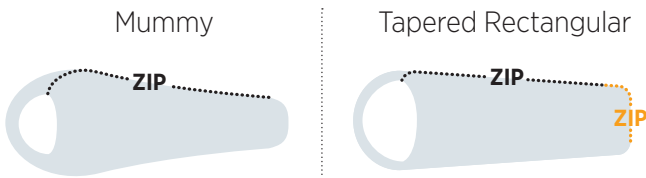

ONE PLANET

All ONE PLANET sleeping bags\* can be zipped together to create a warm, roomy space for two. It's possible to zip any two of our bags together, but we recommend using the same model, size, and shape, and choosing to join bags with one left-hand and one right-hand zip.

## STEP 1

Lay out the sleeping bags and completely undo the main zip.

NOTE: mummy-shaped bags only have one zip, while tapered-rectangular bags have two – a main zip down the side and a second around the foot. Undo the main zip completely and the foot zip partially.

## STEP 2

Starting from the base of the sleeping bags, zip together the zips on the base of the two bags.

## STEP 3:

Repeat this process, zipping together the top zips on the two bags.

## EXPANSION GUSSETS

The ONE PLANET Expansion Gusset is zipped in using the same method.

The Sleeping Bag Expansion Gusset (Expander) is a simple, clever way of adding wiggle room to all ONE PLANET sleeping bags\*. This zip-in extension adds approximately an extra 25 centimetres in diameter to ONE PLANET sleeping bags.

\*excluding the Camp Lite

**NOTE:** we use YKK zips on our sleeping bags. These zips can vary by up to 2% in length/stretch.
